December 1, 2017

LLG Sub Region Collaborative Governance Forum

Ontario

Local Health Integration
Network

Réseau local d'intégration
des services de santé

Progress to date

- Setting the Stage meetings in the Spring and analysis of the input from participants
- Meetings with individual health service providers—getting the lay of the land
- Development and discussion of Sub Region Integration Tables
- Follow up session with health service providers Nov 1, 2017
- Getting ready to launch the LLG Sub Region Integration Table

Setting the stage feedback for LLG Sub Region- June 19

What does Shared Accountability look like?

- Comments on structure—shared purpose, goals, MOUs, Boards learning/sharing with each other and having more common strategic goals, community Accreditation
- Comments on Data—common indicators/understanding of meaning, integrated measurement, using tools to unite us (SHiiP)
- Comments on principles (trust, openness, commitment, clear expectations) and how this would affect care (more patient centered, less silos, primary care based)

Setting the stage feedback for LLG Sub Region - June 19

Input related to the Sub Region Integration Tables:

- Scope: Narrow down and focus on top priorities, person focused, evidence based
- Membership: depends on priorities, consider different levels of staff and folks outside of health care, consider ad hoc reps as needed
- Must be strong communication
- Be bold and take risks
- Have an attitude of silo busting

Setting the stage feedback for LLG Sub Region - June 19

Top Priorities:

- **Addictions and Mental Health (AMH):** integration/interface with primary care, access to AMH
- **Primary Care:** linkage of Primary Care & Care Coordination support; knowledge & distribution of orphan patients & succession planning
- **Technology:** IT integration and patient interface, one patient/one record, leveraging technology to bring the service to patients rather than patients to the service
- **Boundary concerns**—develop common procedures and engagement
- **Further investigation/data:** Data to understand sub-region, work to understand data as a group

November 1st HSP session

- An opportunity to provide an update since the spring sessions
- Specific data on the demographics and health of the South East and within sub regions
- Building on our success – presentation on Health Links lessons learned
- Breakout sessions by sub region
- Feedback was generally positive, providers would like to do this once or twice per year
- LLG: great discussion. Still early days and more analysis and dialogue required but themes included primary care, integrating care, aligning strategies, health equity and a common patient feedback approach.

Sub Region Integration Table

Purpose of the Sub Region Integration Table:

Provide high level planning, input, and oversight related to the priorities and activities of the sub region that will lead to more patient focused, integrated and responsive care and services at a system level. It will be a driving force of vertical integration in concert with other LHIN wide initiatives focused on horizontal integration and service delivery.

Sub Region Integration Table

Composition:

Patients and caregivers, primary care, public health, addictions and mental health, community services sector, LTC, hospital, home care, other sectors and groups as indicated in the sub region.

Expression of interest closing today.

Reporting format:

To the South East LHIN Sub Region Clinical Leads Committee

Meetings will begin in next year. Frequency to be determined but likely monthly or bimonthly

Other things happening at the LHIN:

- Continued work to integrate / align as a new organization
- IHSP planning starting early spring
- Continue to work on the priorities from the Ministry's mandate letter (available on the South East LHIN website)
- LHIN Care Coordination Models of Primary Care integration
- Many capitals projects, AMH Redesign work, health care tomorrow projects
- Opioid treatment and services

Governor Support

- Sorting out the engagement between Sub Region work and governance but updates planned at least annually
- Governance working together to understand each others role in the system is important
- Look for opportunities to connect with governors on how your organizations can collaborate and share -- developing a regional system of integrated care
- Focus on strong, healthy organizations to support a patient-centred approach with more integrated and collaborative care, less silos
- How can you be a good governance partner to support the staff to deliver on their mandate?
- What input would governors have to inform long term planning?
